

The impact of Saral/Altika wave data on the wave forecasting system of Météo-France : update

L. Aouf, J-M. Lefèvre

Division Marine et Océanographie, Météo-France

Saral/Altika first verification workshop , Toulouse 27-29 August 2013

METEO FRANCE
Toujours un temps d'avance

OUTLINE

1- Motivation

2- Data quality control

3- Test runs

4- Results

5- Conclusions

motivation

- **Only Jason-2 is used in the operational wave forecasting system : the need of using one more altimeter is crucial in order to get more accurate sea state parameters**
- **Evaluate the impact of the assimilation of Saral/Altika wave data on the wave forecasting System**
- **Assesement of data quality control procedure**
- **Preparing Saral/Altika wave data for operational use**

Saral/Altika wave data and QC procedure

- Saral NRT products are downloaded in NETCDF format from <ftp.saral.oceanobs.com> : period 31 March to 1 August 2013
- Quality control procedure is implemented to prepare the data the assimilation in the wave model :

Land flag	0
RMS_SWH/4.15	≤ 0.3 m
SWH Min	0.5 m
SWH Max	13 m
Ice flag	0
σ_0 Min	5 db
σ_0 Max	30 db
Number of valid pointd	≥ 35

Threshold values in red as for Jason-2

Example of QC check (cycle 1 : 31/03 to 18/04)

collected data from 20130331 to 20130418 : 1009860

Before QC

Nb of data : 1009860

after quality control proc : 797581

After QC

Nb of data : 797581

→ ~21 % Saral Sig. Wave heights are rejected before the assimilation

Histograms of Saral sig. wave heights

METEO FRANCE

Distribution of Saral data on wave model grid

- **Assimilation of altimeters**

- Optimal interpolation on SWH (Significant wave height)
- Correction of wave spectra using empirical laws and assumptions

Saral wave obs are collocated with model grid points : Super-observations

Example of 1-day global coverage of SARAL Sig. wave height (~5800)

Description of runs :

from **31 March 2013 to 1 August 2013**

- **Test runs set-up**

- Wave model **MFWAM** (global coverage $0.5 \times 0.5^\circ$ irregular grid), wave spectrum in 24 frequencies (starting 0.035 Hz) et 24 directions
- ECMWF analyzed winds every 6 hours
- Assimilation time step 6 hours

→ **Assimilation** of Saral/Altika Sig. wave heights

→ **Assimilation** of Saral and Jason-2 sig. wave heights

→ Outputs from the operational forecasting system (**MFWAM with assimilation of Jason 1 & 2**)

→ **Baseline** run of MFWAM without assimilation

Assimilation of Saral/Altika Sig. Wave heights Validation with Jason 1 & 2

Assimilation of Saral

Assimilation of Saral April and May

Without assimilation

baseline run April and May

Bias = 0.04
SI = 11%
RMSE = 11.1%
Slope = 1.04
Intercept = -0.08

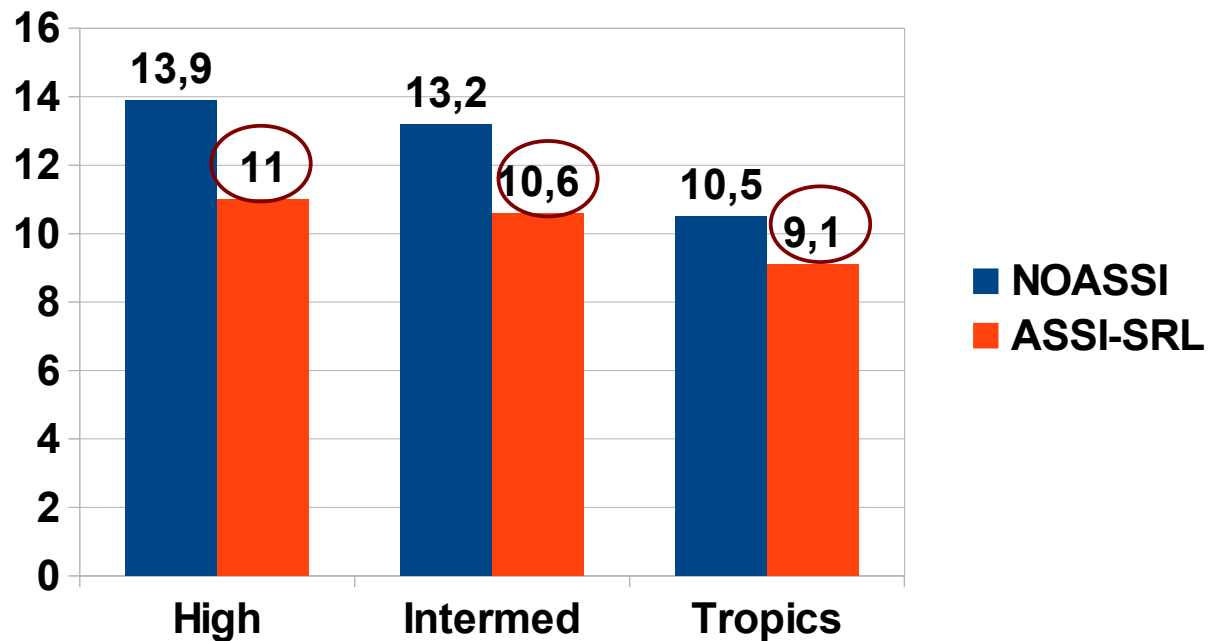

Data collected : 792877

April and May 2013

Bias=0.14
SI=14.2%
RMSE=15%
Slope=1.12
Intercept=-0.20

validation of MFWAM-OPER with Saral April and May

MFWAM without assimilation

validation with Saral April and May

Bias = 0.
SI = 10,1%
NRMS = 10.1%
Slope = 1 .03
Intercept = -0.08

Data collected : 343523

April and May 2013

Bias=0.10
SI=13.7%
NRMS=14,2%
Slope=1.11
Intercept=-0.21

Conclusions

- The runs for June and July showed the same tendency : good quality of Saral/Altika significant wave heights
- positive impact on the wave analysis and forecast : **ready to be used operationnaly in MFWAM (waiting for the availability of Altika on the GTS in BUFR format)**
- The use of Saral with Jason-2 showed very promising results (the SWH errors are greatly reduced **SI<9% in the tropics**)
- The work is in progress concerning the use of Saral/Altika in regional model MFWAM-Réunion (0.25°) !
